Issue Solved

Equipping Aurora staff and residents with the right tools and technology is part of Aurora’s mission. A Police Body Camera Solution is a priority initiative for the Aurora Police Department and Mayor’s Office in order to continue to create transparency in public safety. Aurora seeks an end-to-end Body Camera solution that provides the hardware and accessories for field officers, an evidence management solution (or integration to the existing solution), redaction capabilities (or integration to the existing solution), and a storage/management solution. The City of Aurora used the Marketplace.city process to evaluate Police Body Camera Solutions and Partners that would be efficient and cost-effective and support Aurora’s public safety mission while providing new features and functionality.

Solution Overview

Axon knows the importance of providing your officers with the equipment and technology needed to help keep them safe and informed, while increasing transparency with the communities served. With Axon Body 3 camera and Axon Evidence Digital Evidence Management Solution (DEMS), APD can have access to a comprehensive solution that offers Cutting-edge body camera technology, including access to LTE- connected features, Seamless integration between multiple pieces of hardware and software An easy -to-use DEMS to manage, edit, review, and share collected data

Outcomes and Benefits

- **Superior Product:** Axon’s cutting-edge body camera technology is the preferred solution: it is easier to use and has all the features requested by the Aurora Stakeholders, including access to LTE- connected features
- **Reduced Administrative Burden:** An easy -to-use DEMS to house collected data from multiple source eases the administrative burden associated with evidence management, video redaction, storage management, and sharing
- **Continuous Improvement and innovation:** Axon has a clear product roadmap, and all updates are included
- **Minimized Technology Risk:** Structured as a service, the City of Aurora is not responsible for any changes/upgrades to the hardware, accomplishing the City’s goals

for both a predictable, cost effective solution while ensuring the program maintains at the forefront of technology advances

Solution Description

Procurement, Contract and Pricing

The City of Aurora used the Marketplace.city Clearbox process to find and procure their Body Camera solution. The process evaluated over 30 companies, with the City identifying 6 best fit leaders for vendor outreach. Aurora conducted a proof of concept with the top 2 vendors to pilot product usability, features, and retention capabilities. Multiple solutions met Aurora’s criteria on basic functionality, usability and experience. Axon’s usability, tech specifications, pricing, new features, growing customer base, and strong support references, and preference from the Aurora end users were the major factors contributing to the selection.

Axon’s solution is structured as a service over 5 years. The City of Aurora is not responsible for any changes/upgrades to the hardware, accomplishing the City’s goals for both a predictable, cost effective solution while ensuring the program maintains at the forefront of technology advances. The Solution includes BWC hardware, evidence management software, and other accessories to support the BWC Program. Hardware Refreshes take place in years 3 and 5.

The final Master Services Purchase Agreement includes other public safety solutions (including dash cameras, tasers). The bundling approach allowed the city to achieve 30% cost savings over the lifetime of the contract.
